

DESIGN REVIEW TEAM

MISSION STATEMENT

This committee was established by the Chancellor in 1989 to review and advise on proposed building sites, schematic building designs and landscape elements, street furniture and signage, and design refinements after schematic design approval including final exterior material and color specifications.

Approval by this review body is a prerequisite for submittal to CPEC (Campus Physical and Environmental Committee) for formal approval on sites and building designs.

The DRT Meetings are held monthly. Should items of urgent matter require attention between meetings dates, our office will notify the committee via email. Supporting information, including project description(s) and photographs will be made available via the Campus and Environmental Planning Web Site for your review. Email voting may be requested at that time.

Committee Composition
